

KENAN EGE

Game Programmer

Warsaw, Poland | +48 576 875 149 | kenanegee@gmail.com

Portfolio: kenanegee.com | **GitHub:** github.com/KenanAegean | **LinkedIn:** linkedin.com/in/kenanegee

Professional Summary

Game programmer specializing in C++/C# with dual-engine expertise (Unity, Unreal Engine 5). Experienced in gameplay systems, AI programming, and real-time optimization across 5+ shipped projects. Seeking gameplay or engine programming roles at PC and console studios.

Technical Skills

- **Programming Languages:** C++ (proficient, 3+ years), C# (proficient, 3+ years), Python (intermediate)
- **Game Engines:** Unity (advanced, 2+ years), Unreal Engine 5 (proficient, 1+ year - Blueprints & C++)
- **Game Programming:** Gameplay Systems, AI (State Machines, Behavior Trees), Physics Systems, Performance Optimization, Local Multiplayer
- **Development Tools:** Git, Perforce, Visual Studio, Rider, Unreal Blueprint, Unity UI Toolkit, GitHub Actions
- **Specialized Skills:** Camera Systems, Procedural Generation, Character Controllers, Physics Programming, Editor Tools
- **Additional:** Agile/Scrum, CI/CD, Docker, Jira, Object-Oriented Programming

Game Projects

Killwats League — Unreal Engine 5, C++, Blueprint — 4-Week Project - Team of 9

Sep 2025

- Architected adaptive dual-mode camera system in C++ with automatic zoom and positioning based on 6-player locations and ball trajectory, dynamically switching between stationary rotation and horizontal tracking modes for optimal gameplay visibility.
- Developed arcade ball physics system with real-time wall bouncing, friction, air drag, goal-homing, and dynamic charge mechanic that builds over time and triggers explosive knockouts on overcharge. Implemented seamless character swap system with intelligent targeting based on ball proximity.
- Created defensive AI controllers managing chase behaviors, interception positioning, and strategic ability usage with decision algorithms balancing dash vs. walk based on distance and game state.
- Built local multiplayer framework supporting keyboard + 4 simultaneous gamepads with automatic device detection and player assignment. Designed options menu and save system persisting graphics settings, camera modes, and preferences across sessions.
- Collaborative Futuregames project. Available at: kenanege.itch.io/killwats-league

Echoes Of Stella — Unreal Engine 5, C++, Blueprint — 7-Week Project - Team of 14

June 2025

- Architected core echolocation mechanic in C++ using custom audio ray-casting system generating 3D sound-based visual echoes for real-time navigation in darkness, maintaining 60+ FPS on mid-range hardware.
- Developed base pawn class and player controller handling 8+ simultaneous input states with collision detection, jump mechanics, and dynamic audio triggers. Optimized real-time rendering pipeline reducing draw calls by 35% through LOD systems and culling algorithms.
- Collaborated with designers and artists in 7-week Agile sprint using Perforce, conducting daily standups and code reviews to resolve 40+ technical blockers and maintain project health.
- Published complete build using Inno Setup installer.
Collaborative Futuregames project. Available at: kenanege.itch.io/echoes-of-stella

Dark Descent — Unity, C# — 4-Week Project - Team of 15

Feb 2025

- Implemented responsive player controller with dash mechanics (i-frame invulnerability, cooldown management), 8-directional movement, and cursor/movement-based directional facing. Executed cross-platform port to mobile with custom fake cursor system for gamepad-style aiming and touch-optimized UI scaling.
- Architected modular enemy AI system using state machines supporting 5+ enemy types with distinct behaviors (patrol, chase, attack, flee) and configurable detection parameters. Programmed two miniboss encounters with phase-based attack patterns including spread and homing projectile systems.
- Developed spell casting framework with two spell types (targeted AoE Smite, Holy Light with damage/blind/heal effects) and collectible system with guaranteed drop logic. Designed world-space health bar UI system for combat readability.
Collaborative Futuregames project. Available at: kenanege.itch.io/dark-descent

Lord Of The Horde — Unity, C# — Solo Project

Oct 2024

- Designed complete wave-based survival game with real-time XP progression supporting 15+ upgrade paths, dynamic difficulty scaling, and persistent high score tracking using JSON serialization.
- Implemented procedural map generation creating randomized layouts from modular tilesets, ensuring balanced spawn positions and playable pathfinding in 95% of generated maps. Developed enemy spawner supporting 50+ simultaneous AI agents using object pooling, maintaining 60 FPS.
- Source code available with documentation. Code at: github.com/KenanAegean/Lord-Of-The-Horde

In A Bad Mewd — Unity, C# — 4-Week Project - Team of 14

Nov 2024

- Created destructible environment system with real-time physics simulation and procedural fracture effects supporting 30+ simultaneous objects without performance degradation. Implemented combo-based scoring with tag validation preventing exploitation and tracking chain multipliers.
 - Completed full game loop in 4-week development cycle.
- Collaborative Futuregames project. Available at: kenaneg.itch.io/in-a-bad-mewd-webgltest

Professional Experience

Futuregames Academy
Game Programming Student

Sep 2024 – June 2025 (Expected)
Warsaw, Poland

- Intensive program covering real-time systems, gameplay engineering, and team-based production. Completed 4 major team projects in collaborative groups of 9-15 developers using Agile methodologies and professional version control workflows.

Orion Innovation
Software Engineer

Mar 2023 – Sep 2024
Istanbul, Turkey

- Debugged and optimized performance-critical systems, reducing error rates 25% through systematic profiling and refactoring. Implemented CI/CD pipelines using Docker and Jenkins.

Education

Futuregames Academy
Game Programming Specialization

Sep 2024 – June 2025
Warsaw, Poland

Doğuş University
B.S. Computer Engineering — Software Engineering Minor

Sep 2018 – Jul 2023
Istanbul, Turkey

- Erasmus Exchange: University of Lodz, Computer Science (Feb 2022 – Jul 2022)

Interests and Activities

Music Production: Amateur musician and producer with released tracks on Spotify. Applies creative problem-solving and technical skills to audio composition and production. Listen at: open.spotify.com/artist/2CMjhwFMDeusyTCoKcTNL8
