GRADUATION PROJECT - GAMERLOG

Lead Developer & Fullstack Developer

In this platform users can create collections of the games they liked and played, make comments and ratings on them.

The biggest plus of this platform is by looking at the user's collection of games and own ratings and their reviews, an AI recommendation system will make them more comfortable when buying new games by suggesting the games they may like next.

- Back-end: Django
- Front-end: Vanilla Html Css, Bootstrap 5
- Database: SQL Lite 3
- I am still developing and improving this project

INTERESTS

Game Design/Programming

Game design fuels my passion, and I am continuously honing my skills in this domain. Actively engaging with this hobby, I've taken part in competitions like Game Jams to further my growth and expertise

Studio inTB
