Projects

kenanege.com — HTML, CSS, JavaScript, GitHub Actions

Sep 2024

- Built an 8-page modular static site with HTML5 partials for easy maintenance.
- Implemented a responsive design with CSS Flexbox/Grid and vanilla JavaScript.
- Automated repo sync and FTP deployment via GitHub Actions.
- Link: kenanege.com

Echoes Of Stella — Unreal Engine 5, C++, Team Project

June 2025

- Developed the core echolocation mechanic and created the base pawn class that generates sound-based echoes in darkness.
- Implemented key parts of the player controller, optimized performance, and contributed to UI design and the options menu.
- Supported teammates by debugging Blueprints, guiding Perforce integration, and maintaining overall project health.
- Prepared the final build (.exe) using Inno Setup and designed the [itch.io](https://futuregames.itch.io/echoes-of-stella) page.
- Link: <https://futuregames.itch.io/echoes-of-stella>

Dark Descent — Unity, C#, Team Project

Feb 2025

- Implemented core movement, dash, health system and enemy AI logic.
- Built modular spell casting mechanics and UI health bar controls.
- Link: <https://futuregames.itch.io/darkdescent>

In A Bad Mewd — Unity, C#, Team Project

Nov 2024

- Created destructible object classes with real-time physics and material fracture.
- Scoring system prevented abuse via tag validation and tracked combo chains.
- Link: <https://futuregames.itch.io/badmewd>

Lord Of The Horde — Unity, C#, Solo Project

Oct 2024

- Designed full game loop for wave survival gameplay with XP upgrades and AI variants.
- Implemented procedural map system, enemy spawner, UI, and persistent high score manager.
- Link: <https://github.com/KenanAegean/Lord-Of-The-Horde>

No Need For Speed — Unity, C#, Solo Project

Mar 2025

- Designed and implemented core systems for a networked multiplayer racing game using Unity's Netcode for GameObjects (NGO).
- Built race logic including countdowns, lap tracking, checkpoints, and player state sync across clients.
- Implemented car controller, multiplayer lobby, and game manager.
- Link: <https://github.com/KenanAegean/No-Need-For-Speed>

GamerLog — Django, Python, Graduation Project

Jun 2023

- Developed a user-focused game logging and recommendation web platform.
- Integrated ChatGPT API for conversational game suggestions. Used PostgreSQL + Bootstrap.
- Link: <https://kenanege.com/gamerlog.html>

Professional Experience

Orion Innovation

Software Engineer

Mar 2023 – Sep 2024

Istanbul, Türkiye

- Debugged and optimized Java-based enterprise services, reducing error rates and improving backend response time.
- Dockerized microservices and implemented CI/CD pipelines, enabling smoother testing and deployment.
- Built an internal NBA match prediction platform using Django, ML models, and PostgreSQL for rapid analytics.

Orion Innovation

Software Engineer Intern

Aug 2022 – Oct 2022

Istanbul, Türkiye

- Developed a full-stack environment reservation tool using Java Spring Boot and MySQL.
- Participated in Agile sprint reviews, gaining first-hand experience in collaborative software delivery.

BDH - NETAŞ

Software Engineer Intern

Aug 2021 – Sep 2021

Istanbul, Türkiye

- Completed Salesforce admin and dev fundamentals including Apex scripting, automation rules, and cloud deployment.

Biltek Design and Software A.Ş.

Software Engineer Intern

Sep 2018 – Nov 2019

Istanbul, Türkiye

- Designed front-end layouts and backend features for commercial websites using PHP and MySQL.
- Implemented user login sessions, auth security, and CMS features.

Education

Futuregames Academy

Game Programming

Sep 2024 – Present

Warsaw, Poland

University of Lodz

Erasmus - Computer Science

Feb 2022 – Jul 2022

Łódź, Poland

Doğuş University

Software Engineering (Minor)

Sep 2019 – Jul 2023

Istanbul, Türkiye

Doğuş University

Computer Engineering (Major)

Sep 2018 – Jul 2023

Istanbul, Türkiye

Technical Skills

- **Programming Languages:** C++, C#, Python, Java, JavaScript, HTML5, CSS3
- **Game Engines:** Unity (2D/3D), Unreal Engine 5 (Blueprints, C++)
- **Frameworks/Libraries:** Django, Bootstrap, Unity UI Toolkit
- **Tools:** Git, GitHub, Perforce, Docker, Rider, VS Code, Jira, Inno Setup
- **DevOps:** CI/CD pipelines, GitHub Actions, Docker
- **Game Programming:** AI State Machines, Behavior Trees, ScriptableObjects, Level Design Tools

Leadership & Activities

English Club

President/Founder

Spring 2020 – Fall 2022

Doğuş University

- Founded club to enhance English speaking and presentation skills. Organized weekly themed discussions.

IEEE Computer Society

Board Member

Spring 2019 – Fall 2022

Doğuş University

- Planned technical events, software seminars, and university coding workshops.
